

Falling over the eaves of a flat roof is not an option:
 in case of obstacles

 Balconies	 Installations	 Advertisements at the front
 Glass (curtain)	 Glass (windows)	 Drains

Falling over the eaves of a flat roofs is not an option:
 In case of obstacles (part 2)

 Wall lighting	 Obstruction	 Obstruction
 Sharp points	 Pipes	 Water

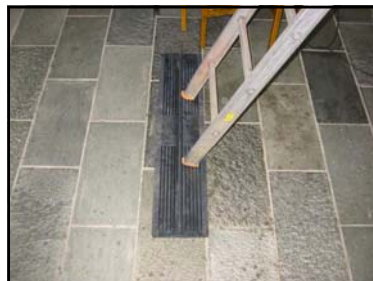

Photo presentation 3
Use of fall protection equipment in The Netherlands

Harness

Always use a fall arrest harness or a vest to minimize the length and severity of the fall

Well-fitting, so not too wide and not too tight.

Never without an energy absorber!

An energy absorber (deceleration device) reduces the shock to the body to an acceptable level (kN = 600 kg)
